Axis Electronics Counterfeit Avoidance Policy Statement

Axis Electronics has implemented counterfeit avoidance procedures in line with AS5553 and DEF STAN 05-135.

Material shall be sourced either directly from the manufacturer or using authorised distributors. If these routes are not viable by account of obsolescence, allocation, or extended lead times, then trusted and approved non-authorised distributors may be considered and agreed with customer's prior approval.

All material sourced via non-authorised distribution shall be verified by means of inspection and testing for electronics components aligned with the requirements of AS6081 and AS6171 as agreed, alongside IDEA 10.10 and any customer specific requirements.

The controls in place are based on the risk of procuring counterfeit material considering the component market risk, criticality of the material in relation to commodity, product performance and safety.

The controls ensure that all material incorporated into products manufactured is genuine and unused with traceability to the original component manufacturer or raw material as appropriate.

Please do not hesitate to contact either of us to discuss this further or arrange a more in depth conversation about how we can assist you in developing your supply chain.
